

DOCUMENT CAPTURE

Today's advancements in capture technology are allowing organizations to perform like they never have before.

IBM Datacap goes even further beyond traditional document capture by combining natural language processing, machine learning and advanced imaging to process complex documents and transform unstructured data into actionable insights. It's not an industry solution. It's an enterprise solution—for any industry.

Here at Pyramid Solutions, we help our clients with cognitive capture solutions that identify handwriting on documents, initiate workflows, understand embedded data tables and even send bookmarked documents to FileNet. Ask us how we are using natural language processing to classify and correlate relationships between documents to ensure seamless data ingestion.

PYRAMID SOLUTIONS IS HERE TO HELP YOU IMPLEMENT THE PERFECT DOCUMENT CAPTURE SOLUTION EVERY STEP OF THE WAY.

- Perform organizational health checks
- Perform a gap analysis on your current environment
- Define costs, benefits and risks
- Define KPI measurements and an approach to production deployment
- Ensure your system is running smoothly by conducting regular reviews, pre-deployment
