

# Migration Manager

## SOLUTIONS FOR COMPREHENSIVE DOCUMENT MIGRATION

### Highlights

- Flexible, modular approach
- Plugable architecture
- Multiple source and target repositories
- Consolidate departmental solutions into an enterprise repository
- Migrate and transform content, metadata and annotations
- Comprehensive transformation capabilities
- On-premises or cloud
- Scale up and out to optimize migration throughput
- Managed service option
- IT-focused solution
- Reusable tool
- Comprehensive audit trail

### The Challenge

Enterprises small and large continue to be overwhelmed with unstructured information. From scanned images and digital documents to emails and social media posts, the volume and variety of information continues to grow unabated. Further, this information is often scattered across the organization, on hard drives, in file shares or in multiple content repositories and systems, making it unwieldy, inefficient to access and potentially creating legal or compliance risks.

Beyond the compounding growth, other factors such as the shift to cloud-based repositories and the need to harness this information for AI applications - necessitate a smart strategy for consolidating and organizing this information. A major step in this process is to have a robust content migration strategy that drives business value, protects against risk factors and works effectively within your IT infrastructure.

### Our Solution

Pyramid Solutions' Migration Manager is a platform to extract, transform and load (ETL) unstructured information from multiple sources into a target enterprise content management infrastructure. It not only handles content objects but all the metadata associated with the content. This tool is used by our experienced ECM practitioners to implement your content migration and consolidation goals at scale. Migration manager produces a comprehensive audit log as the content is extracted, transformed and loaded into the destination repository. This audit trail facilitates both legal, compliance and quality control.

## Benefits

- Reduced hardware and software costs
- Reduce or eliminate technology obsolescence
- Greater productivity and reduced cost in finding and using business content
- Better end customer service
- Reduced legal and compliance risk

### Competency

CloudPak for Business  
Automation

## Migration Examples

- Upgrade from legacy Image Service or Content Manager to CloudPak for Business Automation (CP4BA) and the FileNet P8 repository.
- Migrate SharePoint to IBM FileNet P8. Move departmental SharePoint sites into an enterprise-class ECM infrastructure.
- Move on-premise content to the cloud. Targets can be CP4BA on your public or private cloud provider, or another cloud-based repository such as Box.
- Retire ImageRight solutions and migrate to CP4BA and IBM FileNet P8. CP4BA can support both the content migration and any associated workflows.
- ECM modernization. Move from older, prior-generation repositories to the most current technology and platforms.
- Foundation for application migration. Re-purpose your content with new, modern workflows and applications.
- M&A consolidation. Multiple, disparate repositories supporting multiple businesses can be unified in a single architecture.
- Support remote and hybrid work models through cloud-based content infrastructure. Provide secure and managed access consistently across your workforce whether in office, work-from-home or on the road.

## About Pyramid Solutions

Pyramid Solutions, an IBM Business Partner, specializes in Business Automation Workflow, ECM, Capture, RPA, and Cloud technologies that drive growth through best-in-class solutions.

With our unique combination of industry expertise, strategic thinking, and technology leadership, Pyramid Solutions solves business and technology challenges by delivering visionary solutions that produce exceptional results.
